Screening...

Conveying...

State of the art

The ViPower range of TRP vibratory feeders, conveyors and screeners employ with two out of balance motors and produce a linear motion. The combination of a higher stroke and up to 1500 RPM motors feeds, conveys and screens your product to your specifications.

Employed in a wide range of industries from pet food through to recycling, the TRP range of vibratory feeders, conveyors and screeners are highly reliable and do not need a lot of maintenance.

Flexibility

Units are available with dimensions up to 6 meters in length and 2 meters in width. A wide range of options is available including covers, discharge chutes, screens and support stands. All models are available in mild steel or with 304 stainless steel contact parts.

Reliability

All machines within the ViPower TRP range come complete with a 12 month mechanical warranty. Laser profiling and "slot & tab" construction are extensively employed in our designs, ensuring optimum simplicity and durability. All major components such as motors and isolators, have an expected working life in excess of 30,000 hours.

Precision

For applications where variable or metered feeds are required, the TRP range can be operated in conjunction with an electronic frequency inverter control. Also the motors can be optional supplied with a phase-reversal brake unit, to minimise out of balance when stopping.
