PARTS & SERVICE

Service.

ViPower Europe BV has a service unit to serve or maintain your equipment. We design our machines in such a way that they do not require frequent maintenance. If you do not have the experience, people or equipment to maintain your machine, ViPower can do it for you.

Gearbox reconditioning.

ViPower Europe BV can recondition your Locker Rotex gearbox for you. We have the experience, parts and equipment in house. After receipt of your gearbox we will clean and demount your gearbox. All tolerances will be measured and all parts will be checked. You then will receive a quotation for the reconditioning, so you know exactly what your costs are. If you do not wish to take advantage of our proposal you'll only pay a small investigation fee. We also have some reconditioned gearboxes in stock.

Test facility.

ViPower Europe BV has a test facility available to test your product on a variety of screening, feeding and conveying equipment. Although our experience could size the right machine for your application we still insist to do a test with your product. The results are what will be guaranteed in writing. The test facility can be used by ViPower users, for as long as they use our equipment, free of charge. The first trial for potential customers is also at no cost.
